

AI HACKATHON

LAUNCH DAY

Build. Deploy. Impress.

10 DAYS • 4 MEMBERS • 1 PRODUCT

Launching: September 15, 2026

BEFORE WE BEGIN...

"Raise your hand if you have spent hours staring at an Excel sheet trying to make sense of data."

"What if an AI could do that in 20 seconds — and hand you a business report?"

"That's exactly what you're going to build in the next 10 days."

THE PROBLEM

Businesses are drowning in data.

CSV files & sales sheets — unread

No time to analyse manually

No tool to turn data into decisions

YOUR MISSION: Build an AI Agent that turns any CSV into instant insights & business reports.

Zero coding required for the end user. Full AI engineering from your team.

WHAT YOU ARE BUILDING

DataSense AI

Automated Data Analysis Agent

01

Upload CSV

Any business data

02

AI Analyses

Agent writes & runs code

03

Report Ready

Charts + Insights + PDF

 Upload student marks CSV →  Charts auto-generated →  "34% students need remedial support in Statistics" →  PDF Report

HOW THE AI AGENT WORKS

1 User uploads any CSV file

2 Agent reads & understands data structure

3 Agent writes Python code & executes it

4 Generates bar charts, pie charts, trend lines

5 LLM writes plain-English business insights

6 One-click PDF report export

The user sees none of the code. Just the magic.

YOUR TECH STACK

LLM Brain

OpenAI GPT-4o

Agent Logic

LangChain Agents

Charts

Matplotlib / Plotly

UI

Streamlit

PDF Export

ReportLab

Language

Python

YOUR TEAM STRUCTURE

4 Members · 2 IT Vedant Students · 2 External Participants

AI Engineer

LLM integration,
agent logic & prompts

Backend Dev

CSV parser, code
execution, pipeline

Frontend Dev

Streamlit UI,
charts display, UX

Product Lead

Testing, PDF export,
demo preparation

Every member codes. Roles guide who leads what — not who does what alone.

10-DAY BUILD ROADMAP

WEEK 1 — BUILD THE ENGINE

Day 1–2 Setup + first GPT-4o API call working

Day 3–4 Agent reads CSV + auto-generates Python code

Day 5–6 Charts generated + displayed in UI

Day 7 End-to-end test on 3 real datasets

WEEK 2 — BUILD THE PRODUCT

Day 8–9 Insights in plain English + PDF export

Day 10–11 Streamlit UI connected end-to-end

Day 12 User testing with 5 real CSVs

Day 13–14 Polish + branding

Day 15  Full demo dry run — 5-minute walkthrough

Daily commitment: 1–2 hours per person. Consistent beats intense.

JUDGING CRITERIA

AI Quality

How smart are the insights?

30%

Working Product

Does it actually run?

25%

UI & Experience

Is it easy to use?

20%

Demo & Pitch

Can you explain it?

15%

Innovation

Did you add something extra?

10%

WIN OR NOT — YOU WALK AWAY WITH THIS

Live Deployed AI Product

Your name on it. Streamlit Cloud. Shareable link.

GitHub Repository

Clean code that interviewers can actually read.

Demo Video

2-minute screen recording for your portfolio.

LinkedIn Post Ready

"Built an AI Data Analysis Agent using GPT-4o in 10 days."

Companies are paying ₹8–15 LPA for people who can build what you're about to build.

"Ten days from now, you will stand here and demo an AI product that most working professionals don't know how to build."

"Companies are paying ₹8–15 LPA for people who can do exactly what you're about to do."

The clock starts TODAY. Let's build.
